

Howdy friends. My name is Winder Lyons and in the next few minutes, I'm going to be discussing a wonder of nature. A mineral called zeolite which has a very unusual property. It's a negatively charged mineral and what it does in nature, and what it does in your body, is that it captures and binds, and in our case, removes heavy metals, toxins, chemicals. Most of the things that are not supposed to be there, positively charged toxins.

Now, in nature, zeolites are common. They form when volcanic lava and ash contact sea water. So everywhere in nature that they form, they're polluted because they bind heavy metals, for instance. And they've been in constant use in agriculture, been on the United States Government what's called GRAS, Generally Regarded As Safe list for use in the dairy industry for 75-plus years.

When Chernobyl blew, they dumped tons of zeolite on the site to absorb all the radioactivity and the toxicity. So in nature, this incredible substance happens. So if you're using zeolites to detoxify your body, it's literally the finest chelating agent there is on the planet. Nothing in the world does more for cleaning your body than zeolites.

But because they're always polluted in nature, the best way to imbibe a zeolite is if it's lab-grown and clean. In nature, the rock sizes are always unsymmetrical, they're not uniform. In the lab, you can grow a symmetrical, perfectly formed substance that is chemically absolutely identical with the Clinoptilolite that's found naturally, except it's better. Any time you have a zeolite in nature, it's polluted and you have to clean it. So I don't care how safe you are, what you're left with will always have some residue of solvents and other cleaning agents so that these exposed sites that come with the lab-grown zeolite, you have more of them, that's what attracts and binds the toxins into your body.

Zeolites are totally inert. They do not interact with your body biologically in any way. Their only function is to act like liquid fly paper and they travel – oh, and because the Coseva TRS, which stands for Toxin Removal System, is also nanosized, it is 100 to 1000 times more effective than anything that can possibly be mined in nature. So this incredibly small particle that is contained within water goes everywhere in the body that water goes, which is literally everywhere. And this has tremendous impact on us, and sometimes very quickly.

We have reports of children who have not spoken who've been on the spectrum, beginning to speak within sometimes the first day of using this stuff. There is so much here and so much real science behind it. Go to the website, Coseva.com and read the white papers. For those who need science and want to chew on it, there are pages and pages and pages of reference materials. This is not news. This stuff has been around for quite a while.

But I want to talk just a minute about heavy metals and the impact they have on our bodies. We don't realize that we are repositories for trillions of particles of heavy metals. And what they do is they tend to clog up the entrance ports and communication centers to our cells.

These very, very small particles of lead, cadmium, mercury, aluminum, zinc, all these things. We're not allowed to use leaded gas in our cars, right? But guess what airplanes use, leaded gas. So we are constantly bombarded with heavy metals. It's in our food, our air, our water, our personal care items. As well as insecticides, pesticides, herbicides, chemicals of all sorts. We live in a toxic soup.

So what happens when you use the Advanced TRS? Well, it acts like liquid flypaper, coursing all through our bodies, grabbing all of these toxins that aren't supposed to be there, and removing them from our systems. So then it's like we have a reboot. We all of a sudden start getting our lives back. Our sleep improves. Our energy levels go up. Mood is enhanced. Sometimes people are unable to lose weight, for instance, is one thing this does. Because your body is very smart, if you have an overabundance of toxins, then rather than allow that to harm you, the body will sequester those toxins by wrapping them in fat and storing them.

So sometimes people can't lose weight no matter what they do. Well, that's why, because the body sometimes will just hold onto that stuff because it needs it to protect yourself, you. So get the toxins out of the system, the body sometimes will just let go of all that extra fat, and people are losing weight very quickly and not expecting it. Well, that's something that happens.

Sleep improves. Memory improves. Production improves. All those things happened to me. I started taking the stuff now that – the label says you take five sprays a day. It's very simple. You just spray it in your mouth and that's it. Odorless, tasteless, very simple. So I started out with more because I wanted to get clean quicker, so I was doing 15 to 20 sprays a day. Went through about a week or 10 days of headachy things. Some days I had great energy, some days less. But I pushed through. You don't have to do it in any sort of painful or disruptive way. You manage how much you use. But some of us like to move a little quicker and that's available.

So there's no harm that can come from this. It's totally inert. All it does is course through your system, grabbing onto thing that aren't supposed to be there, and getting them out. Now, you can also experience some emotional detox, retracing. You're going to go through a lot of changes with this. I think it's impossible to use this stuff and not notice or not change. Now, everybody's different, you can't promise anybody anything, so no two people are going to go through this in the same way. But one thing is for certain: we live in a very toxic environment and this is the best answer that I have ever seen, or any of us that really understand this, have ever seen. Nothing in the world does better for you than this.

So get back with the person who referred you to this and get some of this incredible stuff. Now, this we are not making medical claims. What we're doing is offering an inert substance – so these statements have not been evaluated by the Food & Drug

Administration. These products are not intended to diagnose, treat, cure, or prevent any illness, disease, or condition.

Thanks for watching.
